archaeological science meetings will have a personality of their own depending on the focus of the host archaeological fraternity itself the 8th australasian archaeometry meeting follows this pattern but underlying the regional emphasis is the continuing concern for the processes of change in the landscape that simultaneously effect and illuminate the archaeological record these are universal themes for any archaeological research with the increasing employment of science based studies proving to be a key to understanding the place of humans as subjects and agents of change over time this collection of refereed papers covers the thematic fields of geoarchaeology archaeobotany materials analysis and chronometry with particular emphasis on the first two the editors andrew fairbairn sue o connor and ben marwick outline the special value of these contributions in the introduction the international nature of archaeological science will

mean that the advances set out in these papers will find a receptive audience among many archaeologists elsewhere there is no doubt that the story that australasian archaeology has to tell has been copiously enriched by incorporating a widening net of advanced science based studies this has brought attention to the nature of the environment as a human artefact a fact now more widely appreciated and archaeology deals with these artefacts among others in this way in this publication

the role of tropics in climate change global case studies uses a 20 chapter easy to understand format to centralize the practical application ideas for functional metagenomics this important resource not only includes chapters on next generation sequencing technologies to study important biogeochemical cycles degradation pathways and detoxification but also gives insight into several tools that have been developed to integrate metadata and sequence data allowing downstream comparative analyses of different datasets using several ecological indices the book further explains newly developed techniques for sequencing dna generating shorter fragments than sanger sequencing techniques to quickly read larger sequences in a shorter amount of time provides a wealth of information to readers on state of the art applications of metagenomics summarizes our current knowledge of the use of metagenomics and gives a novel and powerful insight into the already existing bioremediation process gives an overall picture of metagenomics and its application processes and future prospects in the field of bioremediation

the vegetated biofilter is a low impact development technique that can be integrated into stormwater management of linear transportation systems and capitalize on the natural environment to mitigate stormwater a 4 ft 1 2 m wide by 14 ft 4 3 m long prototype vegetated biofilter was constructed on a moveable frame artificial runoff was delivered to each of three grass beds for comprehensive tests at slopes and flow rates as follows 8 1 medium 4 1 medium 2 1 medium and 2 1 high the medium and high flows represented storm runoff events typical in ohio first baseline tests were performed to obtain concentrations of constituents native to the biofilter artificial runoff formulated with metals native soil and motor oil was applied to one bed at a high concentration for the first part of the event followed by a medium concentration a second bed received medium followed by low concentration runoff and the third bed received low concentration followed

by tap water during the simulated storm events samples were obtained from the inlet surface runoff and underdrain and analyzed for total and dissolved metals tss and oil and grease prior to and at the end of testing cores were extracted from the bed separated into soil roots and grass and each component analyzed for metal content per mass of material the two beds receiving the initial high and medium concentration flow performed well and removal of 7 total metals and tss was above 75 removal of oil ranged from 30 to over 90 the bed receiving low concentration runoff which was near the baseline levels for constituents had mixed performance of removals ranging from none to above 90 illustrating the difficulty of any bmp to treat a relatively clean influent metals above background levels were found primarily in the first half 7 ft 2 1 m of each bed soil particles in the influent flow of the first test in each bed tagged with la were not resuspended in subsequent tests and were not measured at any significant concentration in the outlet surface flow
